QUANTMIND

FX1 · Futuristic Design System

Dark Luxury · Neon Intelligence · Precision Finance

Mobile App · Marketing Website · Web Dashboard · v2.0

Version 2.0 · March 2026

01 Design Philosophy

The futuristic soul of Quantmind — FX1 direction

The FX1 update transforms Quantmind from Dark Luxury into Dark Luxury Futurism. The gold-on-black foundation is preserved — it is the brand's DNA — but every surface now crackles with energy. Cyan and violet neon lines trace data flows. Glassmorphic cards float above deep backgrounds. Buttons pulse and glow. Charts breathe.

Core Design Equation

Black + Gold (prestige) + Cyan/Violet neon (intelligence) + Glassmorphism (depth) + Kinetic micro-interactions (life) = Quantmind FX1

This is not decoration. Every effect carries semantic weight. Cyan signals data and intelligence — it is the colour of computation in the visual language. Gold signals value, precision, and the brand. Violet signals the AI layer. The three colours never conflict because they occupy different visual roles.

Pillar	Visual Expression	Implementation
Dark Luxury	Black-void backgrounds, editorial gold typography, deliberate silence between elements	CSS variables, 5-layer elevation, Georgia serif for display moments
Neon Intelligence	Cyan data flows, violet AI indicators, emerald positive states — all using glow effects at interaction moments only	CSS box-shadow glow, SVG filter feDiffuseLighting, GSAP on hover
Glassmorphism	Cards appear to float — frosted dark glass with translucent borders that catch the neon light behind them	backdrop-filter blur, rgba backgrounds, luminous 1px borders

Kinetic Precision	Every number counts up. Every chart draws in. Every button pulses. Motion is data-driven, never decorative.	requestAnimationFrame, GSAP timeline, Framer Motion spring physics
Holographic Data	Charts and dashboards feel like live holographic projections — dark backgrounds, glowing traces, particle fields	Three.js for 3D elements, Chart.js with custom neon plugins, D3.js force graphs

02 FX1 Color Palette

Extended dark-neon system — complete token set

FOUNDATION — SPACE-DARK SURFACES

Deep Space	Void	Surface 1	Surface 2	Surface 3	Surface 4
#080810	#0D0D1A	#11121E	#181926	#1F2030	#252638
App canvas base	Page body	Card default	Elevated card	Hover / input	Tooltip / float

GOLD — HERITAGE BRAND ACCENT

Gold Deep	Gold Mid	Gold	Gold Bright	Gold Light	Gold Pale
#7A5C0A	#A8780C	#C49010	#D4A017	#E6B845	#F5D875
Pressed state	Borders / dividers	CTA background	H1 headings	H2 / subheads	Quotes / callouts

NEON INTELLIGENCE — FUTURISTIC ACCENT SYSTEM

Cyber Cyan	AI Violet	Teal	Emerald	Signal Pink
#00D4FF	#7B5FFF	#0BBFAA	#00F5A0	#FF3CAC
Data / primary neon	AI features / prompt	Gains / positive	Success glow	Alert / attention

SEMANTIC — FINANCIAL & SYSTEM STATES

Growth	Gain	Caution	Loss	Critical
#10D97A	#0BBFAA	#FFB020	#FF4444	#FF3CAC
Positive returns	Chart: positive series	Medium risk / warning	Negative returns / error	High risk / urgent alert

Color Usage & Neon Rules

Neon restraint	Cyan, Violet, Emerald, and Pink glows are applied ONLY on hover, active states, and focused data moments. At rest, borders are solid without glow. The contrast between resting and active states is what makes the effect powerful.
Glow recipe — Cyan	box-shadow: 0 0 8px rgba(0, 212, 255, 0.4), 0 0 24px rgba(0, 212, 255, 0.15) — use on active chart lines, focused inputs, hovered buttons
Glow recipe — Gold	box-shadow: 0 0 12px rgba(212, 160, 23, 0.35), 0 0 32px rgba(212, 160, 23, 0.12) — use on primary CTAs on hover
Glow recipe — Violet	box-shadow: 0 0 10px rgba(123, 95, 255, 0.45), 0 0 28px rgba(123, 95, 255, 0.18) — use on AI chat interface, Portfolio Doctor screen
Background rule	Surface colors now have a very faint blue-purple hue (#0D0D1A vs pure #0D0D0D). This makes neon accents appear more vibrant through the slight cool cast.
Glassmorphism card	background: rgba(17, 18, 30, 0.72); backdrop-filter: blur(16px); border: 1px solid rgba(0, 212, 255, 0.12); — the translucent border catches neon from below
Active chart series	Stroke: Cyan #00D4FF, 2px. Area fill: Cyan at 12% opacity gradient from value to 0. On hover, stroke brightens to 3px and glow activates.
Gain / loss delta badges	Gain: background rgba(0,191,170,0.15), border 1px Teal, text Teal. Loss: background rgba(255,68,68,0.15), border 1px Red, text Red.

03 Typography System

Four-font hierarchy for dark futurism

Display / Brand	Cormorant Garamond — Serif — 300, 400, 600 Hero headlines, PDF title pages, marketing quotes. Classical letterforms contrast with the neon environment to create expensive tension.

UI Headings	Space Grotesk — Sans-serif — 400, 500, 700 Dashboard headings, card titles, navigation. Geometric letterforms with subtle terminal quirks — feels engineered, precise, slightly sci-fi.
Monospace / Data	JetBrains Mono — Monospace — 400, 600 All numerical outputs: VaR, returns, portfolio values, prices, percentages, ticker symbols. Terminal aesthetic reinforces the data-instrument feel.
Body / Long-form	DM Sans — 300, 400 AI responses, methodology text, support articles. Clean and readable on dark surfaces at body sizes. Lighter weight than the UI font to differentiate reading content from interface labels.

Type Scale

Role	Spec	Usage
Display / Hero	Cormorant 72–96px Light or Regular	Landing page hero, PDF title
H1 / Screen title	Space Grotesk 36px 700	Page titles, section headers
H2 / Section	Space Grotesk 24px 700	Card headers, dashboard sections
H3 / Subsection	Space Grotesk 18px 500	Widget labels, group headers
Body Large	DM Sans 16px 400 line-height 1.7	AI responses, descriptions
Body	Space Grotesk 14px 400	General UI text, table rows
Label / Caption	Space Grotesk 11–12px 500 UPPERCASE tracking+60	Field labels, metadata, timestamps
Data / KPI	JetBrains Mono 14–40px 400 or 600	All financial figures
Neon label	JetBrains Mono 10px 400 UPPERCASE tracking+80 Cyan	Live indicator labels, system status

Futuristic Typography Rule

When a KPI value changes — a simulation completing, a real-time price update, an AI score refreshing — the number must count up/down using requestAnimationFrame (not CSS transitions). Counting animations feel computed. CSS transitions feel designed. Quantmind data should feel computed.

04 Visual Effects System

Glassmorphism, glow, particles, and atmospheric depth

Glassmorphism Cards

All cards in FX1 use a unified glass treatment — semi-transparent dark backgrounds that allow the layer beneath to show through. When the background contains a glowing chart or animated element, the frosted glass creates a depth effect that makes the interface feel three-dimensional.

CSS — Glass Card Spec

```
/* Base glass card — all cards */
.qm-card {
  background: rgba(17, 18, 30, 0.72);
  backdrop-filter: blur(16px) saturate(180%);
  -webkit-backdrop-filter: blur(16px) saturate(180%);
  border: 1px solid rgba(0, 212, 255, 0.10);
  border-radius: 16px;
  transition: border-color 200ms ease, box-shadow 200ms ease;
}

/* Hover — border brightens, faint glow appears */
.qm-card:hover {
  border-color: rgba(0, 212, 255, 0.28);
  box-shadow: 0 0 0 1px rgba(0, 212, 255, 0.08),
              inset 0 1px 0 rgba(255,255,255,0.04);
}

/* Active / selected state */
.qm-card.active {
  border-color: rgba(0, 212, 255, 0.55);
  box-shadow: 0 0 20px rgba(0, 212, 255, 0.15);
}
```

Button Effect System

Primary CTA button	Resting: gold gradient background (#C49010→#D4A017), black text, 8px radius, no shadow Hover: scale(1.02), gold glow — box-shadow: 0 0 16px rgba(212,160,23,0.5), 0 0 40px rgba(212,160,23,0.2) Active (press): scale(0.97), shadow collapses. Release: spring back to 1.0 in 300ms
Ghost / secondary button	Resting: transparent bg, 1px rgba(0,212,255,0.30) border, Cyan text Hover: background rgba(0,212,255,0.08), border-color rgba(0,212,255,0.65), subtle inset glow Active: background rgba(0,212,255,0.15), border full opacity
Destructive button	Resting: 1px rgba(255,68,68,0.35) border, Red text Hover: background rgba(255,68,68,0.12), glow: 0 0 12px rgba(255,68,68,0.3) Must show confirmation sheet before executing destructive action
Simulate button (special)	Gold ring that pulses at 2s interval when idle — keyframe: ring scale 1.0→1.15→1.0, opacity 0.6→0→0.6 While simulation runs: ring becomes a spinner (rotating conic-gradient), gold color Complete: ring flashes Emerald for 400ms then fades

AI submit button	Violet color scheme. Resting: 1px rgba(123,95,255,0.40) border. Hover: Violet glow — box-shadow: 0 0 14px rgba(123,95,255,0.45) Streaming state: button morphs to 'Stop' with pulsing Violet ring
Haptics (mobile)	All primary button presses trigger light haptic impact (Haptics.impactAsync(ImpactFeedbackStyle.Light)) Destructive actions: medium haptic. Simulation complete: success haptic notification

Hover Effects — Component Level

Table rows	On hover: background transitions to Surface3 (#1F2030) in 100ms. A 2px left border in Cyan fades in. Row actions (Edit / Delete) slide in from the right at 150ms opacity + 8px translate.
Navigation sidebar items	On hover: background rgba(0,212,255,0.06), icon color transitions Muted→Cyan in 150ms. Gold left bar (active) pulses faint gold glow.
KPI cards	On hover: border transitions from rgba(0,212,255,0.10) to rgba(0,212,255,0.35) in 200ms. Subtle vertical lift via transform: translateY(-2px). Chart sparkline re-draws at full opacity.
Chart data points	On hover: dot scales from 0 to 6px radius at the hovered x-position. Tooltip fades in 150ms with glassmorphic background. Neon dot glows.
Portfolio asset rows	On hover: weight slider thumb becomes visible (opacity 0→1, 150ms). Allocation percentage highlights in Gold.
Feature cards (web)	On hover: card lifts 6px (translateY), gold border brightens, background shimmer — a subtle linear-gradient sweep from left to right over 600ms.

Atmospheric Background Effects

Particle field (hero)	A canvas-based particle system behind the hero screenshot. 80–120 particles, each a 1–2px dot in Cyan at 20–50% opacity. Particles drift slowly (0.1–0.3px/frame). On mouse proximity, particles are repelled gently. Uses vanilla canvas requestAnimationFrame — no library.
Grid background (dashboard)	A CSS perspective grid — faint lines converging to a vanishing point at the bottom, Cyan at 4% opacity. Creates the illusion of looking down at a data floor. Applied to the main content area background, behind all cards.
Noise texture overlay	A 200×200px SVG filter noise texture at 3% opacity over all surfaces. This prevents the dark backgrounds from looking flat on high-contrast displays. Applied via CSS filter: url(#noise).
Gradient bloom (web hero)	Radial gradient behind the product screenshot: rgba(0,212,255,0.06) at center, transparent at 60% radius. This makes the screenshot appear to glow outward into the dark background.
Scan line shimmer (mobile)	A very subtle horizontal scan-line animation on KPI cards — a 1px semi-transparent line that moves from top to bottom of the card every 4 seconds. Opacity 0.03. Reinforces the 'live terminal' feeling.

05 Interactive Feature Design

Simulation, AI, and live controls

Simulation Scenario Playground

The core interactive feature of Quantmind — the Monte Carlo scenario builder — must feel like operating scientific instrumentation. Controls are precision sliders, not dropdowns. Results update live with a 200ms debounce. The chart redraws incrementally so users see the distribution forming in real time.

Volatility slider	Custom track: dark Cyan at 30% opacity, fill portion in Cyan at 80%. Thumb: 18px circle, Cyan fill, gold border 1px. Hover: thumb scales to 22px with glow. Value displays in JetBrains Mono above the slider, updates live.
Correlation matrix grid	N×N interactive grid. Each cell is a colour-coded square (Crimson→neutral→Teal). On hover: cell expands 4px with border glow. Click to edit: cell enters input mode with a floating numpad. Cholesky validation runs on every change — invalid matrix shows Pink warning glow on affected cells.
Time horizon control	Segmented button row (3M / 6M / 1Y / 3Y / 5Y / 10Y / 30Y). Active segment: Gold fill, black text. Transition between segments: the active gold fill slides across in 200ms (not a jump — a physical slide).
Path count stepper	Two buttons (−/+) flanking a JetBrains Mono display showing the current path count (2,000 / 5,000 / 10,000). Button press: ripple effect, count changes with a brief cyan flash. Tier-gated values show a Gold lock icon.
Live simulation progress	While simulation runs: a progress bar fills with Cyan gradient across the top of the results card. Path count increments live (e.g. '0 / 10,000 paths'). Completed paths: fan chart draws in incrementally — lines appear from left to right as batches complete.
Scenario comparison	Side-by-side two-panel layout. Left: baseline scenario. Right: stress scenario (2008, COVID, custom). A vertical divider can be dragged left/right to widen one panel at the expense of the other — standard drag-to-compare UI pattern.

AI Assistant Interface

Chat input	Multi-line auto-growing textarea. Dark background (#0D0D1A), 1px violet border at rest, violet glow on focus. Send button: filled violet with white arrow, pulses on hover.
Streaming response	Text streams token by token using Server-Sent Events. A Violet cursor blink trails the stream. Once streaming stops, cursor fades out in 500ms.
Quick action chips	Horizontal scroll row of pre-set queries ('Explain VaR', 'Check my portfolio', 'Run stress test'). Chip style: Surface2 bg, 1px Cyan border. On hover: background becomes Cyan at 8%, border brightens.

Workflow cards	When a structured AI workflow (Portfolio Doctor) completes, its output renders as a card — not as plain text. Card header: Violet gradient, brain icon, workflow name. Body: structured findings with coloured severity badges.
Model indicator	A small indicator in the chat header shows which model is responding: 'Haiku' in Teal, 'Sonnet' in Cyan, 'Opus' in Violet. Changes dynamically when the router switches models.
AI typing indicator	Three dots that pulse in sequence with Violet color (not grey). Scale animation: each dot: scale(1)→scale(1.4)→scale(1), staggered by 160ms.

Risk Temperature Gauge — Futuristic Redesign

The risk gauge is one of the most recognisable UI elements in the app. In FX1 it is redesigned as a full arc from 0° to 270°, with the following characteristics:

- Arc segments colour-coded in 10 steps from Teal (safe) through Amber (moderate) through Gold to Pink/Red (extreme)
- The needle is a sharp gold pointer with a Violet glow at the pivot point
- The current risk score renders in JetBrains Mono 32px beneath the gauge, counting up from 0 on load
- A faint outer ring pulses at 3s interval in the current risk colour — Teal for low, Amber for medium, Red for high
- On the dashboard, clicking the gauge expands it to a full-screen modal with a breakdown of which portfolio factors are contributing to each risk level

06 Advanced Charts, Boards & Analytics Design

Holographic data visualisation system

Chart Design Philosophy — FX1

Charts in Quantmind FX1 are not static images. They are live, interactive, holographic-feeling data projections. Every chart animates on mount. Hovering reveals depth. The colour palette creates the illusion that data lines glow against the dark background.

Chart Technology Stack

All charts use Chart.js 4 with custom plugins for: neon glow (SVG filter), animated data entry, gradient area fills, and custom tooltip rendering. Three.js is used for the 3D portfolio universe view (Pro tier). D3.js force simulation for the correlation network graph (Pro tier).

Chart Visual Specifications

Background	rgba(0,0,0,0) — transparent, inherits glassmorphic card. Never use a separate chart background fill.
Grid lines	Horizontal only (no vertical). 1px, rgba(0,212,255,0.08). Dash: [4, 8]. These are barely visible — structure without noise.

Axis labels	JetBrains Mono 11px, Muted #5A5A7A. X-axis labels: dates in 'MMM YY' format. Y-axis labels: right-aligned, abbreviated (K/M/B notation).
Primary series line	Cyan #00D4FF, 2px stroke. On hover: 3px, glow: 0 0 8px rgba(0,212,255,0.6). Area fill: linear-gradient, Cyan 18% opacity at top, 0% at bottom.
Secondary series	Teal #0BBFAA, 1.5px dashed [6,4]. On hover: solid 2px.
Negative / loss series	Red #FF4444, 1.5px. Area fill: Red 12% opacity gradient.
Neutral / baseline	Muted #5A5A7A, 1px dashed.
Data points	Default: no dot (clean lines). On hover: 6px filled circle in series color with glow. On click (pinned): permanent 8px circle with tooltip locked open.
Tooltips	Glass card: background rgba(13,13,26,0.85), border 1px rgba(0,212,255,0.35), backdrop-filter blur(8px). Value in JetBrains Mono. Delta badge (Teal/Red). Shadow: 0 4px 20px rgba(0,0,0,0.6).
Chart mount animation	Lines draw in left-to-right using Chart.js animation duration: 800ms, easing: 'easeInOutQuart'. Area fill fades in at 400ms delay after line completes.
Legend	Horizontal row below chart. Each item: colored dot 8px + JetBrains Mono label 12px Muted. Clicking legend item toggles series with 300ms fade.

Monte Carlo Fan Chart — FX1 Spec

Median line	Cyan #00D4FF, 2.5px, glow: 0 0 8px rgba(0,212,255,0.5)
25th–75th percentile band	Cyan area fill at 20% opacity — this is the 'core' zone
5th–95th percentile band	Cyan area fill at 8% opacity — outer uncertainty cone
1st–99th percentile band	Cyan at 3% — extreme tail, barely visible, hint of uncertainty
Individual paths (sampled)	50 random paths from the simulation, each Cyan at 4% opacity, 0.5px stroke. They appear as a faint shimmer inside the bands.
VaR threshold line	Horizontal dashed line in Gold at the 95% VaR level. Gold label on the right axis.
Current portfolio value	Vertical gold line at t=0 (today). A gold dot marks the start of every path.
Animation	On simulation complete: median line draws in over 600ms. Bands expand outward from the median over the next 400ms. Sampled paths fade in last at 200ms total duration each, staggered.
Interaction	Hover scrubs a vertical cursor across the chart. Tooltip shows all five percentile values at that time. Click pins the cursor and keeps tooltip open.

Correlation Heatmap — FX1 Spec

Grid cells	Rounded squares (4px radius). Color scale: Red #FF4444 (−1.0) → Surface3 #1F2030 (0.0) → Teal #0BBFAA (+1.0)
Cell hover	Hovered cell: border 1px Cyan, scale(1.05), tooltip shows exact correlation value and pair name
Cell animation on load	Cells fade in sequentially in a wave pattern (top-left to bottom-right), each delayed by 20ms × (row + col). Total animation ~600ms.
High correlation alert	Cells with |correlation| > 0.85 (excluding diagonal): Pink border pulse every 3s, Pink glow. This alerts users to concentration risk.
Diagonal	Correlation=1.0 cells show Gold fill instead of Teal — they are visually distinct as self-correlations.
Click behavior	Clicking a cell opens a side panel showing the historical relationship between the two assets — a scatter plot of daily returns.

Dashboard KPI Cards — FX1 Spec

Card base	Glassmorphic: rgba(17,18,30,0.72), backdrop-filter blur(16px), 1px rgba(0,212,255,0.10) border, 16px radius
Metric value	JetBrains Mono 28–32px, White #FFFFFF. Counts up from 0 on load over 800ms.
Metric label	Space Grotesk 11px UPPERCASE, tracking+60, Muted #5A5A7A
Delta badge	Gain: Green bg at 15%, Green text, up arrow ↑. Loss: Red bg 15%, Red text, down arrow ↓. JetBrains Mono 12px.
Sparkline	Cyan 1.5px line, no fill, no axes. 30px tall. Animates in on mount.
Live update	When a value updates: background flashes rgba(0,212,255,0.08) for 300ms. Value cross-fades to new number.
Card hover	translateY(−3px), border-color to rgba(0,212,255,0.30), box-shadow: 0 8px 32px rgba(0,0,0,0.4)

Analytics Report Boards

Revenue & User Growth Board

- Primary chart: area chart (Cyan fill). Time range selector: pill tabs (7D / 1M / 3M / 6M / 1Y / ALL) with gold active state.
- Secondary metrics row: MRR, ARR, DAU, Trial conversion — four KPI cards in a row below the chart.
- Cohort retention chart: heatmap grid (week × cohort). Color scale: Red (0%) → Surface3 (50%) → Teal (100%). Cells animate in row by row.

AI Cost & Model Analytics Board

- Stacked bar chart: Haiku (Teal) / Sonnet (Cyan) / Opus (Violet) costs per day. Bars animate up on mount.
- Donut chart: model usage distribution. Each segment glows in its model colour on hover. Center label: total queries today in JetBrains Mono.

- Latency percentile chart: three lines (P50 Teal / P95 Cyan / P99 Pink). Log scale Y axis.
- Token budget gauge: arc from 0 to daily limit. Fill: Cyan→Amber→Red depending on % used. Animates from 0 on page load.

Portfolio Universe View (Pro / 3D)

- Three.js force-directed graph. Each asset is a sphere, size proportional to portfolio weight. Connected by spring forces inversely proportional to correlation (high correlation → shorter spring).
- Sphere colors: Cyan for equities, Teal for ETFs, Violet for crypto, Gold for commodities, Amber for bonds.
- On hover: asset sphere glows, tooltip shows ticker, weight, expected return, volatility.
- Orbit controls: user can rotate and zoom the 3D space with touch/mouse.
- Clusters of highly correlated assets visually pull together — making concentration risk spatially obvious without reading any numbers.

OTA & Release Board

- Timeline chart: horizontal bars per release channel (dev/preview/production). Gold for active, Teal for healthy, Amber for staged, Red for paused.
- Adoption curve: S-curve showing device adoption of each OTA update over 24 hours. Animates live as data refreshes.
- Crash rate micro-chart: sparkline per update version. Red threshold line. If a release crosses the threshold, the entire row gets a Red pulsing border.

07 Mobile App — FX1 Design Language

iOS & Android — React Native / Expo

Screen Design System

App background	#080810 — deepest space. Slightly bluer than pure black.
Navigation bar	rgba(11,11,20,0.90), backdrop-filter blur(20px), 1px top Cyan border at 15% opacity
Tab bar icons	Active: Cyan icon + Gold label. Inactive: Muted. Badge: Red filled circle, White number, no border.
Safe area	Status bar text: White. Home indicator: matches background.
Card treatment	All cards: glassmorphic per spec. Corner radius: 16px standard, 20px for feature cards.
Simulate button (bottom centre)	64px floating button above tab bar. Gold gradient fill. Cyan glow ring pulsing at rest. On press: haptic + scale(0.94) + glow brightens.
Bottom sheet	rgba(13,13,26,0.95), blur(24px), top corners 20px radius. Drag handle: 36×4px, Surface4 fill. Spring physics on open/close.
Skeleton loaders	Shimmer animation using a linear-gradient sweep (Surface2→Surface3→Surface2), 1.5s loop. Not a spinner.

Mobile Chart Adaptations

- Fan charts on mobile: simplified to 3 bands (median + 25/75 percentile + 5/95 percentile). No individual path lines on small screens — too noisy.
- Touch interaction: pinch to zoom X axis (time range). Long press to pin a data point tooltip. Swipe left/right to advance to next simulation result.
- Chart performance: all charts rendered in React Native Skia for 60fps GPU-accelerated drawing. Not SVG on mobile.
- Landscape mode: charts expand to full width. Metrics panel moves to the right sidebar.

08 Marketing Website — FX1 Design Language

quantmind.app — Next.js / Vercel

Hero Section Effects

Background	#080810 full-bleed. Canvas particle field (80 Cyan particles). Radial bloom behind product screenshot.
Hero text animation	Words fade up with staggered 40ms delay. 'QUANTMIND' headline: letter-by-letter reveal in Cormorant Garamond, each letter fading in from 0 opacity + translateY(20px) over 60ms, total ~700ms.
Product screenshot	Floats at 4° tilt. On scroll: tilt gradually straightens to 0°. Box shadow: 0 40px 80px rgba(0,0,0,0.6), 0 0 0 1px rgba(0,212,255,0.12). Cyan glow border brightens on scroll into view.
CTA primary button	Gold gradient + hover glow as per button spec. Secondary 'Watch Demo' button opens a lightbox modal with autoplay video.
Stat counter strip	Three large JetBrains Mono numbers (portfolio values, users, simulations). Count up on viewport entry. Gold number with Muted unit suffix. Separator: vertical 1px Cyan line at 20% opacity.

Website Feature Section Effects

- Section entry: each feature section slides up 60px and fades in on scroll. Threshold: 20% of element visible. easing: cubic-bezier(0.16, 1, 0.3, 1).
- Feature screenshots: glassmorphic device frame (phone or laptop outline). Screenshot inside. On scroll into view: screen content fades in with a scan-line sweep effect (top to bottom, 600ms).
- Interactive demo section: embedded React component from the mobile app codebase — real Monte Carlo simulation running in the browser. Volatility slider, path count, time horizon all functional.
- Pricing cards: the recommended tier (Pro) has an animated Cyan border — a conic-gradient that rotates 360° every 4s, visible as a moving light trace around the card edge.

09 Web Dashboard — FX1 Design Language

admin.quantmind.app & dashboard.quantmind.app

Layout

Sidebar	240px, rgba(8,8,16,0.92), backdrop-filter blur(20px), 1px right border rgba(0,212,255,0.12). Logo at top with Cyan micro-glow. Collapses to 60px with icon-only mode.
Top bar	56px, rgba(8,8,16,0.88), blur(16px), 1px bottom Cyan border 12% opacity. Left: breadcrumb. Centre: search (Space Grotesk, glass input). Right: notifications bell + avatar.
Content area	rgba(8,8,16,1.0). CSS perspective grid background (faint Cyan lines, 4% opacity). All content on glass cards floating above the grid.
Modal	Glass card centred. Backdrop: rgba(0,0,0,0.70) with subtle noise. Opens with scale(0.95)→scale(1.0) + opacity 0→1 over 200ms.

Dashboard Special Effects

- Live data refresh indicator: a Cyan progress line sweeps across the top of the browser viewport when background data fetches run. 300ms to complete, fades out.
- Notification toast: slides in from top-right. Glass card: icon (colored per type) + message + dismiss. Auto-dismisses at 4s. Exit: slides right with fade.
- AI Playground (prompt testing): typing in the prompt input shows a Violet typing cursor. When the model responds, a scanning animation plays across the response container before text appears — a subtle 'loading hologram' effect.
- Feature flag toggle: switching a flag triggers a brief amber flash over the changed row and logs the change in the visible audit tail at the bottom of the page, scrolling in with a Teal left-border.
- OTA publish button: protected by a two-step confirmation. Step 1: button press triggers inline expansion of a confirmation panel (no modal). Step 2: confirm input matches the exact update tag string. Confirmed: button goes Gold spinner → Cyan tick → row updates with new status.
